

Environmental Protection

6.0:JGW:mab/1307
29 May 2003

Statement of Policy

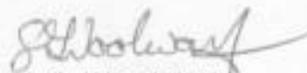

Our Mission is to "Provide top quality products and services at the best value in the fastest time". While accomplishing our mission, we are obligated to be good environmental stewards.

Our Vision is to be "the leader in innovative aviation maintenance solutions, committed to customer, workforce, and community." Vigilant protection of our environment must be an essential element in the development and application of maintenance solutions.

To fulfill this responsibility to the warfighter, our own people and our neighbors we are committed to:

- Continual improvement of our environmental performance
- Adherence to all relevant environmental legislative, regulatory, permit, and other requirements
- Proactive prevention of pollution
- Designing industrial processes to minimize environmental impacts within the limits of technology and economics

It is the responsibility of everyone to remain conscious of the environment in every job at all times. I depend on each member of the NADEP North Island team to minimize the use of hazardous materials; use these materials wisely; employ pollution control systems; and limit consumption of natural resources. If you encounter an unsatisfactory situation that could harm the environment, follow the established procedures to immediately alert the proper authorities. This policy shall be communicated to all employees, customers and stakeholders.

J. G. WOOLWAY
Captain, U.S. Navy
Commanding Officer
